# Teal For Industrial IoT

Teal's industry-leading eSIM technology ensures the highest level of security and accessibility for your Industrial IoT devices. Ensure always-on connectivity with dynamic switching between network technologies, to extend the edge in remote and hard-to-reach locations.

Teal is an Internet of Things (IoT) services company that provides intelligent connectivity and networking solutions to connected device makers and Private LTE operators. Through Teal's eSIM platform, IoT device and network operators can scale globally, automate connectivity workflows, access public and private networks, and evolve with new technologies including 5G and NB-IoT.

"Ground-breaking technology and extremely innovative solution."

CEO, Publicly Traded IoT Partner

Why Teal:

→ Dynamic switching between public and private cellular networks and communications technologies.

→ Multi-carrier capabilities for greater accessibility in remote and hard-to-reach locations.

→ Extend the edge by using LoRaWAN with cellular gateways for data backhaul.

→ Supports a wide range of cellular technologies, including NB-IoT, CAT-M, LTE and 5G.
